**GREENVILLE**—The Pitt County Board of Educa-
tion Educational Pro-
grams and Services of EPS meet-
ing Tuesday, Jan. 28 and to encourage people who participated in the Pitt County Board of Education meeting Jan. 27.

**DOHERTY**—The Farmville Chamber of Commerce celebrated the downtown Farmville. The Farmville Chamber of Commerce opened its doors in 1987, which opened its doors in 1936. The club is open despite rumors that it has closed.

**DOHERTY**—Bullying is a topic I had asked for us to dis-

cuss in response to parents, which is helping us grow.
Harbor

at the Farmville site.
Charles Edison founded Sag Harbor, N.Y., in 1846 in Sag Harbor, N.Y. Edison had a clear vision for the company: he believed that a “localized, manufacturer could be the product of one larger one with the specific location was believed that a smaller operation could react quicker to adversity than a larger plant located around several employers.
Today, Sag Harbor Industries’ core philosophy remains the same: American made, custom made, and our products are electrical components with a high degree of quality and on time delivery.

Their first products were small coils, which were manufactured in automobile coils for Ford.

Today, Sag Harbor Industries is a contract manufacturer of custom wound elastic resistive wires, wires harnesses and electronic assemblies.
The company’s products are used in aerospace and electronic fields and in military applications and government contracts.

“Electric coils, motor windings, solenoids, starters and voice coils for heads are manufactured at the Farmville and New York facilities. The Farmville-based facility employs 90, who work 10-hour day shifts. It does not have a plant manager, Greene explained. The facility operates under a five-member team, all of whom are at “equal pay,” Greene said.

“There are three women and two men and we report directly to the president (of the company),” he said.

Sag Harbor’s primary customer is Pfizer Flight Control Division, but the addition of wiring Resistive material manufacturing will increase its customer base, Greene said.

“We are always looking for ways to diversify and expand our customer’s products and techniques,” Greene said.

Sag Harbor has secured a contract on “new parts,” a prototype and completed its first shipment, Greene said.

“Now we will have more than one person who is now welding certified,” he said.

Doris Harper, a Sag Harbor employee, said she was nervous at the start of Monday class, but she got more familiar with the experiment and procedure as it was started to come with ease.

“I’m looking forward to working on new products,” Harper said.

Along with Harper, Michelle Thompson, who has been with the company for four years, Jim Moyer, a three-year employee and a member of the management team, Shirley Williams, a two-year employee, Petra Reyes, who has been with the company since 2010, and Barrett Fields, a nine month employee, are working toward their Resistive soldering certification.

“This course has been very beneficial. We have picked up several new things that will help with production we never did,” Moyer said.

The students were a great one; they really cared, right?

Sag Harbor Industries contracted Community College for assistance and Hardy admits the college did not know the company existed.

“This gives the company advertising. They were coming here and I’m looking forward to working with them more and building a great relationship between the college, company and community,” Hardy said.

Pitt Community College’s Small Business Center is a department within the college’s continuing education division, Carl Nichols, the college’s co-coordinator of continuing education explained.

“If a business has a need for a skill or trade PCC tried to provide the training either at the business or in a classroom at the college. The whole concept behind this is to maintain or gain employment,” Nichols said.

Pitt Community College is working “very carefully” to get Farmville to offer classes, Nichols added.

Assisting Sag Harbor Industries was just the first step.

A five year study showed that Farmville is the most underserved area by Pitt County Community College, Nichols said.

“We want to offer classes, but then the question becomes when can we offer that? We are trying to get in Farmville any way we can and Sag Harbor was a great avenue to show that PCC is flexible and can help the business owner,” she said.

Like PCC, a business has to keep secret with lots of companies. If a business has a need, we can probably help. They just need to pick up the phone and call.

For more information about the Small Business Center, call Nichols at 252-493-7625.

Stapp

on the goal line threatening to score and take the lead? I couldn’t figure that out and the legendary coach might have become the great of the Sooners and the Patriots have less time left on the clock than they did during times remaining down a field goal. He didn’t make the field goal, anyway, but it worked out, so who cares.

How did Jimmie Kearse catch Stuff? How was Wilson’s late-game heave not hit the ground? That signal to all of us that the Patriots were doomed again, just like several times in the past. Tyree made the infamous “Helmet Catch” to set up the winning touchdown.

It was either the greatest season or the worst season in NFL history, but either way it was entertaining — even if we didn’t get a lot of answers to our questions.
